Shipment SHIP-VC-1026-BOS-FRA exceeded its temperature range. What happened, and can the 4,800 units be distributed?

Shipment SHIP-VC-1026-BOS-FRA had a high-temperature excursion during transfer at the Frankfurt airport controlled-transfer area, when the shipment was being moved from the aircraft container to refrigerated road transport. The investigation states the active air container remained at the transfer bay 94 minutes beyond the validated handoff window after a ground-handler vehicle change, and the replacement refrigerated vehicle arrived after the scheduled connection window. The cause category was recorded as a ground-handler transfer delay. The packaging was reported intact with no opening or physical damage observed. (EXC-VC-1026-04.pdf, pp. 1-2)

What happened, specifically:

- Validated range: 2.0-8.0 C (EXC-VC-1026-04.pdf, p. 1; TL-VCL-1026.pdf, p. 1)
- Excursion window: 15 Oct 2026 08:30 UTC to 11:00 UTC, for 2 hr 30 min (EXC-VC-1026-04.pdf, p. 1; TL-VCL-1026.pdf, p. 1)
- Maximum recorded temperature: 10.7 C, with peak at 09:30 UTC (EXC-VC-1026-04.pdf, p. 1; TL-VCL-1026.pdf, p. 1)
- Affected inventory: 12 insulated cartons totaling 4,800 units from lot CLD-VCL-1026-A (EXC-VC-1026-04.pdf, p. 1)

Can the 4,800 units be distributed?

Yes. The shipment was initially quarantined, but the final quality assessment concluded that the recorded exposure remained within the approved stability allowance for lot CLD-VCL-1026-A, with no prior excursions noted. The final disposition was "Released for distribution," quarantine was removed on 16 Oct 2026 18:10 UTC, and the product may proceed through the authorized distribution channel. This disposition was also approved by Caldova's Director of Product Quality. (EXC-VC-1026-04.pdf, pp. 1-2)

So the evidence-supported answer is: the excursion was caused by a delayed ground-handler transfer after a vehicle change in Frankfurt, and the 4,800 affected units were ultimately approved and released for distribution. (EXC-VC-1026-04.pdf, pp. 1-2)

Traces

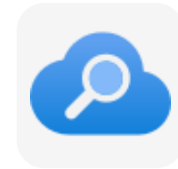

Agent cites sources for answers.

Agent calls all tools needed for full answer.

Check traces to see invoked tool calls.

Cloud-based ingestion with AI-enhanced skills

Customize the ingestion process for your data source and extraction needs.

Azure Blob Storage

Upload documents

An online version of each document is necessary for clickable citations.

Azure Content Understanding

Extract data from documents

Supports PDF, HTML, docx, pptx, xlsx, images, plus can OCR when needed.

Azure OpenAI

Vectorize chunks

Compute embeddings using OpenAI embedding model of your choosing.

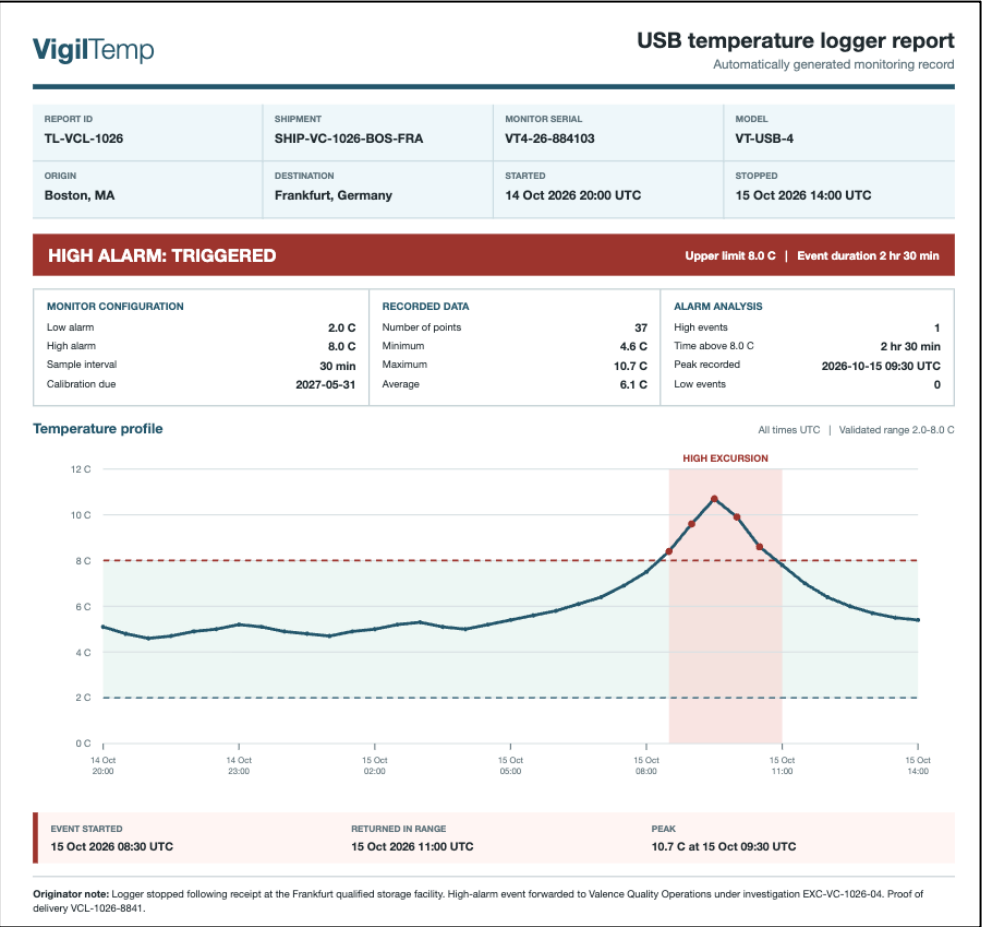

Foundry IQ search index

Indexing

- Document index
- Chunk index
- Both

Rich extraction for multimodal documents

Azure Content Understanding combines OCR and LLM technology for optimal extraction.

Extracts **tables** as HTML (more expressive than Markdown):

```
<tr>
<th colspan="2">MONITOR CONFIGURATION</th>
<th>RECORDED DATA</th>
<th colspan="2">ALARM ANALYSIS</th>
</tr>
```

```
<tr>
<td>Low alarm</td>
<td>2.0 C</td>
<td>Number of points</td>
<td>37</td>
<td>High events</td>
<td>1</td>
</tr>
```

Describes every **image/chart/diagram** in prose *and* JSON:

```
Line chart.
Y-axis labels: 0 C, 2 C, 4 C, 6 C, 8 C, 10 C, 12 C.
X-axis labels: 14 Oct 20:00, 14 Oct 23:00, 15 Oct 02:00, 15 Oct 05:00, 15 Oct 08:00, 15 Oct 11:00, 15 Oct 14:00.
Dashed horizontal lines at 2 C and 8 C.
...
```

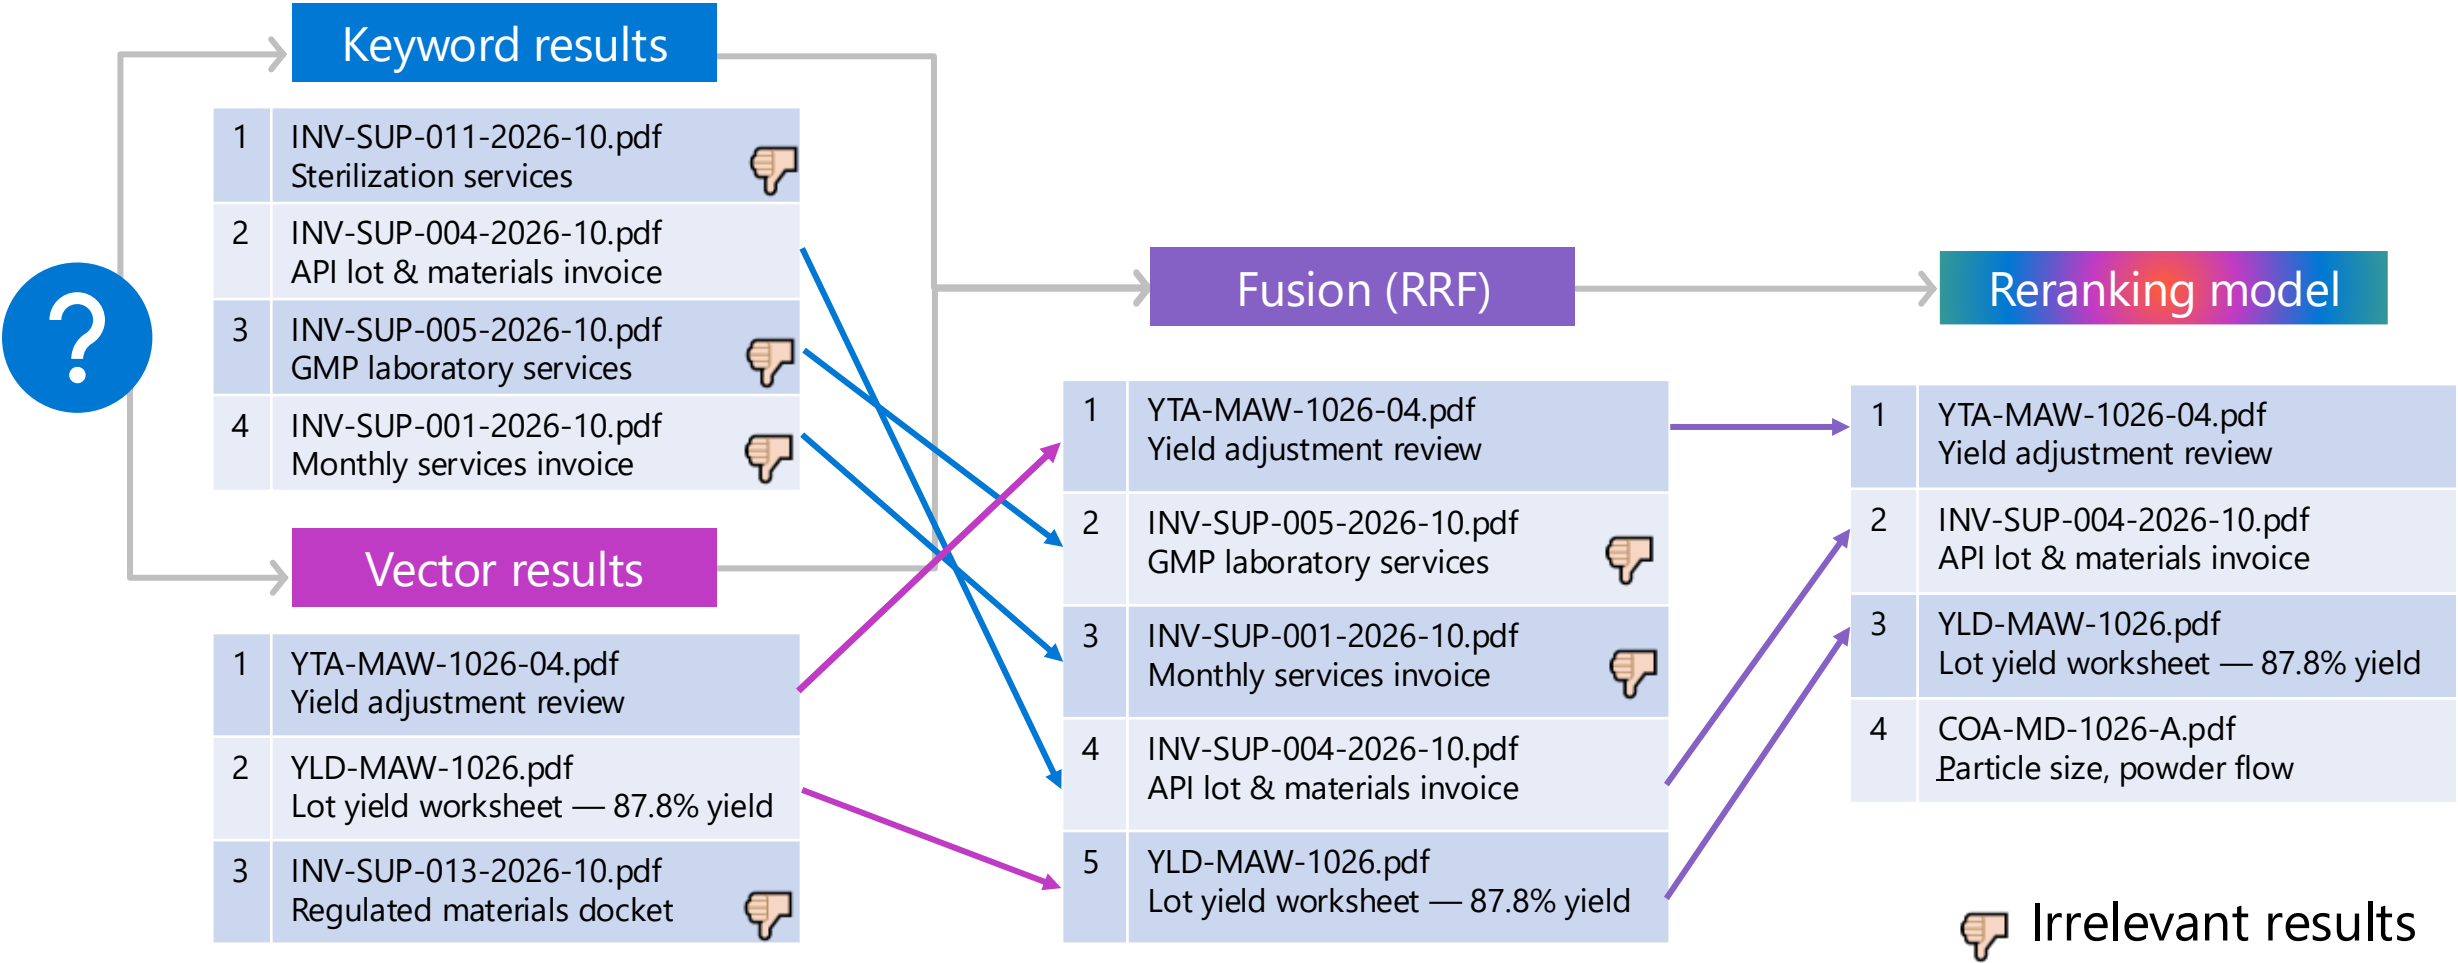

```
{"type": "line",
 "data": {"labels": ["14 Oct 20:00", "14 Oct 23:00", "15 Oct 02:00", "15 Oct 05:00", "15 Oct 08:00", "15 Oct 11:00", "15 Oct 14:00"],
 "datasets": [{"label": "HIGH EXCURSION",
 "data": [5.1, 5.0, 4.9, 5.2, 8.2, 7.0, 5.4]}, ...
}
```

Includes document **metadata** and splits based on semantic boundaries:

```

<!-- PageFooter: TL-VCL-1026 | Page 1 of 1 -->
```

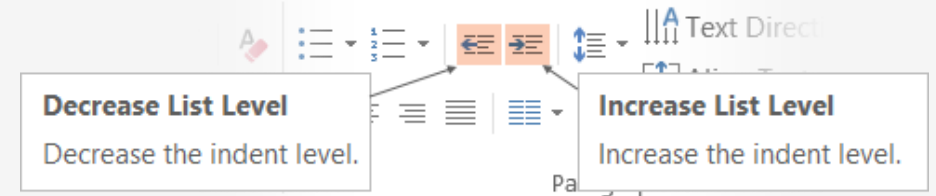

Optimal relevance with hybrid search and re-ranking

Question: "Report yield adjustment and powder flow properties from invoice INV-SUP-004-2026-10"

Scenario 2: Data ACLs

- Learn how to adjust list levels
- Follow the steps on the right

Use the “**Decrease List Level**” and “**Increase List Level**” tools on the **Home** menu to change text levels.

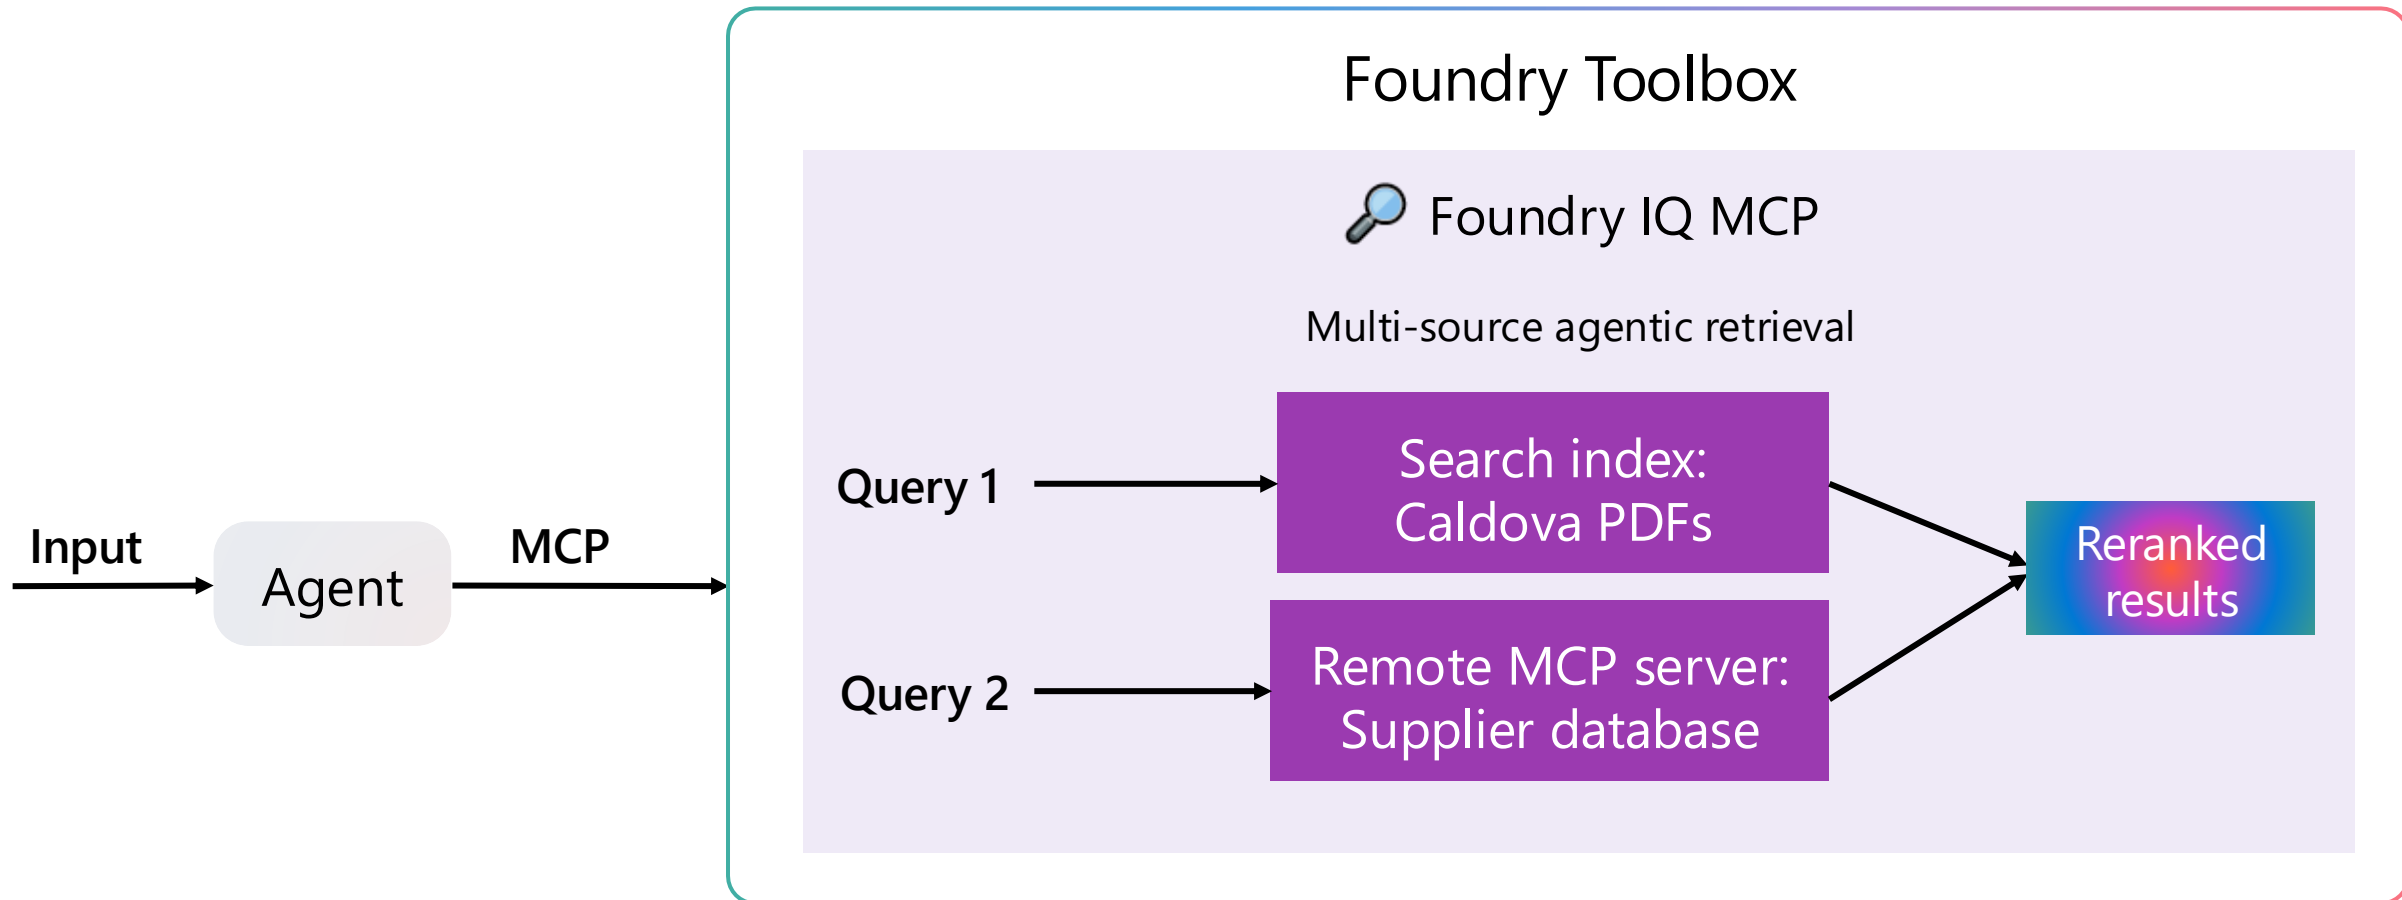

Try this:

1. Place your cursor in the line of text that says “Segoe UI, size 20pt for second level”
2. Next click the Home tab, and then on the “**Decrease List level**” tool. Notice how the line moves up one level.
3. Now try placing your cursor in one of the top “Main topic...” line of text. Click the “**Increase List Level**” tool and see how the text is pushed in one level.

Use these 2 tools to adjust your text levels as you work

Which Caldova product uses the active substance in Meridian API Works' invoiced AUR-API-7 lot? Summarize the lot and Meridian's current manufacturer profile.

The active substance in Meridian API Works' invoiced AUR-API-7 lot is **Caldovexine (SUB-001)**, and the Caldova product that uses it is **Caldovex (CALD-201)**. This product mapping is a current fact from the **Caldova suppliers database**. [postgres-ontology-suppliers search_manufacturers 1]

Lot summary

These are document-based facts for the invoiced lot:

- **Supplier / commercial provider:** Meridian API Works, Singapore. [INV-SUP-004-2026-10.pdf; COA-MD-1026-A.pdf]
- **Material:** AUR-API-7 = **Caldovexine (SUB-001)**. [INV-SUP-004-2026-10.pdf; COA-MD-1026-A.pdf]
- **Lot number:** LOT-MD-1026-A. [INV-SUP-004-2026-10.pdf; YLD-MAW-1026.pdf; COA-MD-1026-A.pdf]
- **Invoice:** INV-SUP-004-2026-10, dated **2026-10-25**. [INV-SUP-004-2026-10.pdf]
- **Manufacturing period:** **2026-10-03 to 2026-10-18**. [YLD-MAW-1026.pdf; COA-MD-1026-A.pdf]
- **Released quantity:** **7,200 kg**. [INV-SUP-004-2026-10.pdf; YLD-MAW-1026.pdf; COA-MD-1026-A.pdf]
- **Charged mass:** **8,200 kg** precursor input (RM-72). [YLD-MAW-1026.pdf]
- **Overall yield:** **87.8%**, within the approved **85-92%** range. [YLD-MAW-1026.pdf]
- **Billing for the API lot line:** **\$184.00/unit**, total **\$1,324,800.00** for line L001. [INV-SUP-004-2026-10.pdf]
- **Packaging:** **144 fiber drums**, double polyethylene inner bags, **50 kg net per drum**. [COA-MD-1026-A.pdf]
- **Retest date:** **2028-10-03**. [COA-MD-1026-A.pdf]

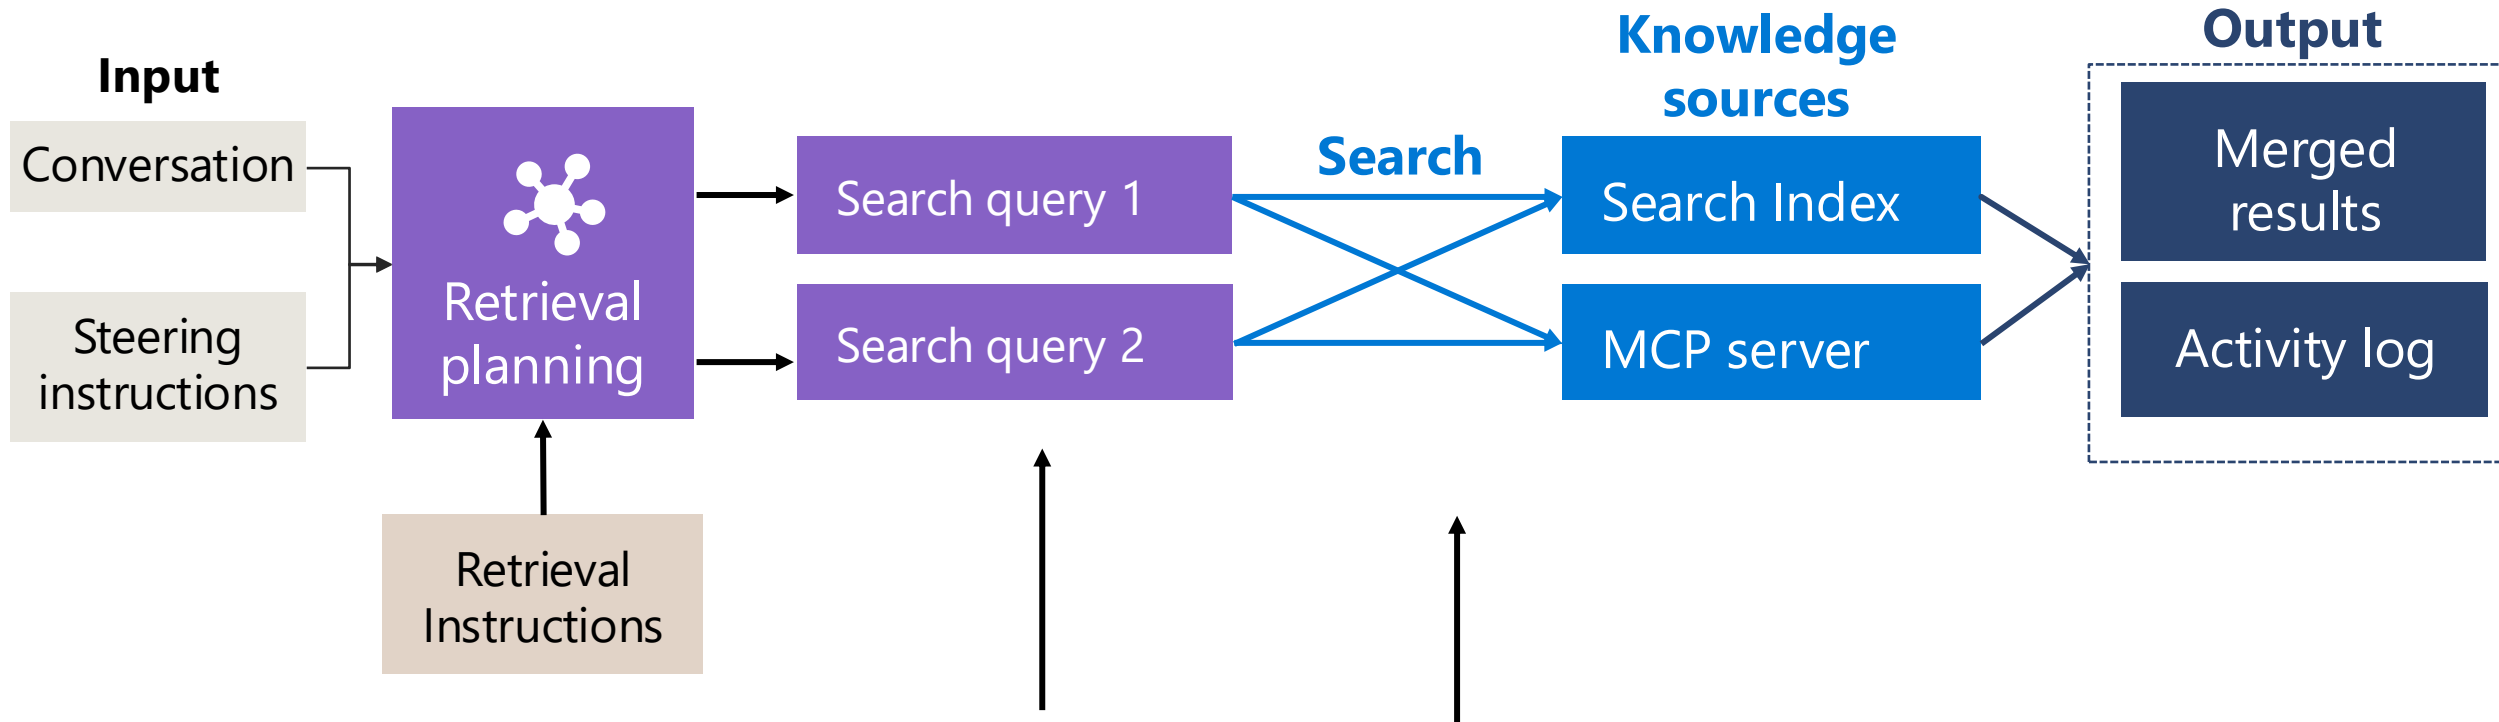

Foundry IQ queries all knowledge source required for question.

Foundry IQ returns merged results across the sources.

Agent cites only the sources used, and labels each claim.

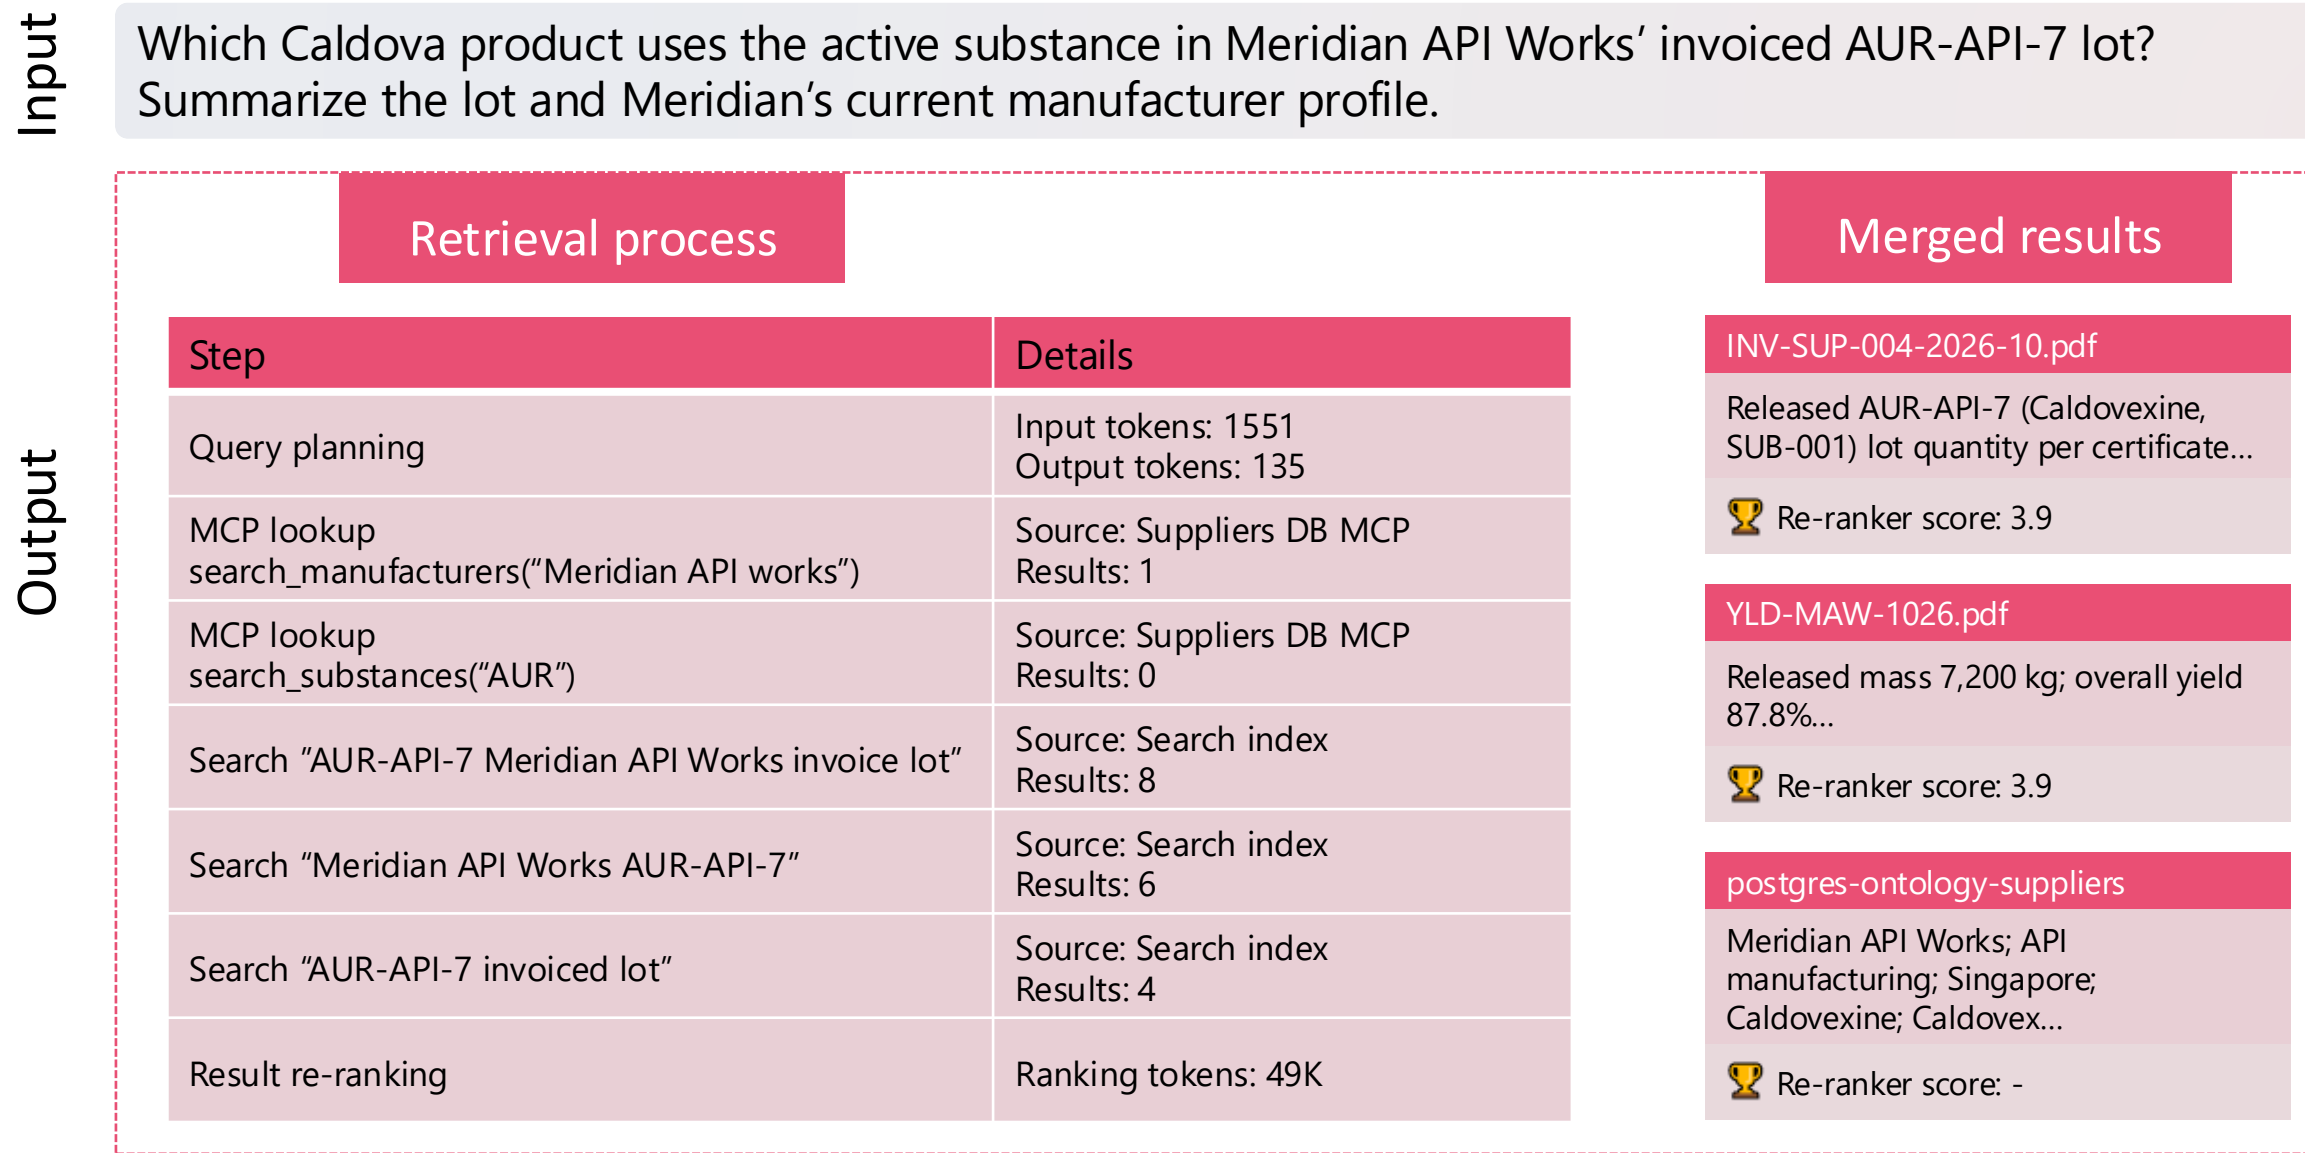

Foundry IQ knowledge base with multi-source retrieval

KB uses an LLM for retrieval planning and optional answer synthesis.

Retrieval planning **generates queries** *and* **selects sources**.

Multi-source retrieval process and results
