Canonical to the Frontier Transformation FY27 H1 keynote script and the AI Tour Keynote E2E Flow & Demo Optimization Planning (Act Three: Caldova Demos).

From many product demos to one enterprise story

Caldova is Microsoft's fictional pharmaceutical company, built to demonstrate the platform end to end in **one continuous business story**. The scenario runs left to right, carrying Caldova from a demand signal to a governed, secured agent fleet, showcasing intelligence compounding within the enterprise.

Many product demos → one red thread

Everything connects into a single Caldova story, not disconnected feature vignettes.

Siloed AI → intelligence that compounds

Microsoft IQ grounds every step, and the intelligence accrues to Caldova — not the model.

Build one agent → build, observe & tune a fleet

A continuous loop, governed and secured across Agent 365, Foundry and Defender.

CALDOVA

Caldova: a global pharma company, mid-transformation

Caldova is on the leading edge of pharmaceutical innovation. **The keynote scenario is a single business thread:** a durable spike in demand for a flagship medicine outruns Caldova's own capacity, forcing a fast-sourcing decision — and the growth that follows exposes new cost, quality, and security pressures that AI agents then resolve.

Demand signal

01

New clinical evidence drives durable prescription growth for a flagship medicine — not a seasonal spike.

Capacity limit

02

Caldova's manufacturing network is already at max capacity; the surge can't be absorbed internally.

Sourcing sprint

03

The Chief Supply Chain Officer kicks off an RFP to onboard the right contract manufacturers now.

Cost exposure

04

New manufacturers meet demand, but invoice accuracy drops — Caldova is overpaying by hundreds of thousands.

Agentic response

05

Teams build, observe and tune agents that audit every invoice against its contract terms.

Trust at scale

06

A governed, secured, observable agent fleet across Agent 365, Foundry and Defender.

The Caldova teams that took the stage

Caldova Pharmaceuticals Global pharmaceutical company

SUPPLY CHAIN & OPERATIONS

Chief Supply Chain Officer

Signals demand · kicks off the RFP (tee-up)

Who Caldova puts on stage and what each persona proves

Persona / Function	What they do on stage	Signature moment	Demos · Products
Supply Chain Leader Operations	Spots the durable demand spike and hands the work to sourcing via Teams	“Reaches out to procurement to kick off the RFP ASAP”	Tee-up · Teams
Sourcing Manager Procurement	Analyzes signals, shortlists suppliers, drafts the RFP, then scores the responses with an autopilot	~2,600 credits ≈ \$26 vs. the hundreds of thousands Caldova used to outsource	Demos 1 & 3 · Copilot, Cowork, Scout, Fabric IQ, Work IQ, Purview
AI Compliance Analyst / IT Admin IT & Governance	Reviews and allocates Copilot credits; governs the agent fleet and its cost	Rejects an over-permissioned agent; flags a GPT-5.5 cost overrun and routes to a cheaper model	Demos 2 & 5 · Microsoft Admin Center, Agent 365 (FinOps)
Developer / AI Engineer Engineering	Builds an invoice-audit agent, scales it to production, then observes and tunes it	Catches a \$5.7K overstatement and a ~\$100K unauthorized charge; lifts quality 67%→85% and cuts cost ~70%	Demos 4 & 6 · GitHub Copilot, Foundry, Foundry IQ
Security Lead Security	Investigates shadow agents, protects the firm at scale, and gets ahead of new threats	Finds a shadow agent two hops from the payment system; asks “Are we protected against Onyx Sleet?”	Demo 7 · Defender, MDASH, Project Perception

The keynote also featured a live model-compete moment (Copilot / ChatGPT / Claude); the Sourcing Manager was portrayed by two demoers across Demos 1 and 3.

How the demos hand off in the order presented on stage

0 · Tee-up Supply Chain Leader signals durable demand and hands the RFP to Sourcing (Teams IM)

CHAPTER 1 · COPILOT

1

Sourcing Manager

Copilot + Cowork

Shortlist suppliers, build the RFP, and score responses.

2

AI Compliance Analyst

Microsoft Admin Center

Credit review and allocation across the org.

3

Sourcing Manager

Scout "Otto"

An autopilot tracks vendor communications, human in the loop.

4

Developer / AI Engineer

GitHub → Foundry

Build, scale and observe the invoice-audit agent.

5

AI Compliance Analyst

Agent 365 FinOps

Govern the fleet and catch a GPT-5.5 cost overrun.

6

AI Dev Lead

Foundry

Tune the agent and fine-tune the model.

7

Security Lead

Defender · MDASH · Perception

Shadow agent two hops from payments; vulns at scale; get ahead of Onyx Sleet.

CHAPTER 2 · BUILD · OBSERVE · TUNE

CHAPTER 3 · SECURE

The red thread — intelligence + trust: the intelligence compounds within Caldova, and every agent is built, observed, tuned and secured at every layer.

SECTION 02

The flagship storyline, chapter by chapter

One continuous business thread — seven demos across three chapters — carrying Caldova from a demand signal to a governed, secured agent fleet.

CHAPTER 1 · COPILOT

The sourcing sprint

Demo 1 Copilot + Cowork
Demo 2 Microsoft Admin Center
Demo 3 Scout "Otto"

Subscription value, bursting into consumption to run the RFP fast.

CHAPTER 2 · BUILD · OBSERVE · TUNE

The invoice-audit agent

Demo 4 GitHub → Foundry
Demo 5 Agent 365 FinOps
Demo 6 Tune & fine-tune

Build once, then observe and tune for accuracy and cost.

CHAPTER 3 · SECURE

Defending the fleet

Demo 7 Defender · MDASH · Project Perception

Inventory, secure and defend a fast-growing agent population at machine speed.

Copilot: the sourcing sprint

THE THREAD

A durable spike in demand for a flagship medicine outruns Caldova's own capacity. The Chief Supply Chain Officer hands the work to sourcing to run an RFP and add contract-manufacturing capacity fast — all inside the Copilot subscription, bursting into consumption (Cowork, Scout) when a heavier task calls for it.

WHAT UNFOLDS ON STAGE

Demo 1 · Copilot + Cowork

In a team group chat, Copilot pulls live supplier data via Fabric IQ into Excel and applies a Work IQ-grounded shortlist skill; the RFP is finished in Word (Purview auto-labels both). Cowork then scores the responses across M365, Fabric and D365.

Demo 2 · Microsoft Admin Center

The AI compliance analyst reviews and allocates Copilot credits across the org — cost management, per-group policies and threshold alerts — and spots the sourcing manager maximizing her credits across Cowork and Autopilots.

Demo 3 · Scout “Otto”

The sourcing manager's first Autopilot proactively completes three priority items — a supplier onboarding / tech-transfer package, an updated execution plan, and a rescheduled stakeholder meeting — surfaced for review before anything goes out.

PERSONAS

Sourcing Manager · AI Compliance Analyst / IT Admin

PRODUCTS

M365 Copilot · Copilot Cowork · Scout (Autopilot) · Microsoft Admin Center (Agent 365) · Fabric IQ · Work IQ · Purview · Dynamics 365

SIGNATURE PROOF

~2,600 credits ≈ \$26 to score the RFP — vs. the hundreds of thousands Caldova used to outsource.

Chapter 1 → 2: growth exposes invoice-accuracy problems — Caldova is likely overpaying by hundreds of thousands.

Build, observe & tune: the invoice-audit agent

THE THREAD

New manufacturers meet demand, but invoice accuracy drops and Caldova is likely overpaying by hundreds of thousands. A developer builds an agent to audit invoices against their contracts — prototyped offline, scaled in Foundry, then observed and tuned for both accuracy and cost.

WHAT UNFOLDS ON STAGE

Demo 4 · GitHub → Foundry

Prototyped offline in the GitHub Copilot app, the agent catches a \$5.7K overstatement on the Astor Ridge invoice. Rehomed in Foundry (GPT-5.5) with contracts in Foundry IQ, it also finds a ~\$100K unauthorized charge — auditable in the trace view.

Demo 5 · Agent 365 FinOps

The AI compliance analyst governs the fleet in the Agent 365 registry — rejects an over-permissioned agent, publishes an approved one, and the ledger flags the contract-policy expert on track to blow its GPT-5.5 cost cap, suggesting a lower-cost model.

Demo 6 · Tune & fine-tune

Optimizing the agent's assets lifts quality from 67% to 85% in one pass; fine-tuning a smaller model (o4-mini) on Caldova's own contracts holds ~82% quality at ~70% lower cost — model diversity, no lock-in, intelligence accruing to Caldova.

PERSONAS

Developer · AI Engineer · AI Dev Lead · AI Compliance Analyst

PRODUCTS

GitHub Copilot · Microsoft Foundry · Foundry IQ · Agent 365 (FinOps) · Models: Phi-4 mini, GPT-5.5, o4-mini

SIGNATURE PROOF

\$5.7K overstatement + ~\$100K unauthorized charge caught from the contract; 67% → 85% quality at ~70% lower cost.

Chapter 2 → 3: Agent 365 connects into SecOps — the same fleet, now seen in Defender.

Secure: defending the agent fleet

THE THREAD

Caldova's agent population is growing fast, from many sources — some unmanaged. The security team works from the same Agent 365 registry, now inside Defender, to inventory, secure and defend the fleet, and to get ahead of new threats at machine speed.

WHAT UNFOLDS ON STAGE

Defender · investigate

The security lead finds a high-risk shadow agent (OpenClaw), maps its blast radius — just two hops from the internal payment system — and blocks unsigned apps on the device until it's brought under management.

MDASH · protect at scale

A multi-model system of hundreds of security agents finds, validates and prioritizes source-code vulnerabilities, narrowing hundreds to the critical few (e.g. an integer overflow), each with a suggested fix.

Project Perception · get ahead

Asked “Are we protected against Onyx Sleet?”, autonomous red / blue / green agents plan a playbook, analyze the threat intel, safely pen-test the billing app, narrow ~20 issues to the critical few, and auto-author detections and a remediation plan.

PERSONAS

Security Administrator · Frontier Security Engineer (Security Lead)

PRODUCTS

Microsoft Defender · Agent 365 · MDASH (agentic code security) · Project Perception

SIGNATURE PROOF

Shadow agent two hops from payments — blocked; ~20 issues narrowed to the critical few; detections auto-deployed.

The red thread: AI in the flow of how a security professional thinks — a callback to the keynote open.

One story, three chapters

At MCAPS Start, the Caldova demos ran as one continuous thread across three chapters — Copilot in the flow of work, then build · observe · tune, then secure the fleet — with Microsoft IQ grounding every step so the intelligence compounds within Caldova.

CHAPTER 01

Copilot

The sourcing sprint

WHO **Sourcing Manager · AI Compliance Analyst**

A durable demand spike outruns Caldova's capacity. The team runs the RFP with Copilot and Cowork, scores the responses for ~\$26, governs credits in the Admin Center, and lets Scout follow up.

OUTCOME Subscription value, bursting to consumption — work once outsourced, now done in-house.

CHAPTER 02

Build · Observe · Tune

The invoice-audit agent

WHO **Developer · AI Engineer · AI Dev Lead**

Growth exposes invoice overpayments. A developer prototypes an audit agent in GitHub, scales it in Foundry with contracts in Foundry IQ, observes it, then tunes and fine-tunes it for accuracy and cost.

OUTCOME 67% → 85% quality at ~70% lower cost — intelligence accrues to Caldova.

CHAPTER 03

Secure

Defending the fleet

WHO **Security Lead · IT Admin**

The agent population grows fast. From the shared Agent 365 registry in Defender, the team investigates a shadow agent, scans code with MDASH, and gets ahead of Onyx Sleet with Project Perception.

OUTCOME A governed, defended fleet — security in the flow of how a pro thinks.

Intelligence that compounds within Caldova

THE IQ LAYERS — AND WHERE EACH LANDS ON STAGE

Fabric IQ

Live supplier data pulled into Excel for the shortlist.

Chapter 1

Work IQ

Grounds the shortlist skill in Caldova's own working context.

Chapter 1

Foundry IQ

Contracts as reusable knowledge — the audit agent's grounding.

Chapter 2

Agent 365

One registry for the fleet — governed in FinOps, seen in Defender.

Chapters 2 & 3

SIGNATURE PROOF POINTS

~\$26

to score the whole RFP (~2,600 credits) — work once outsourced for hundreds of thousands.

\$5.7K + ~\$100K

an overstatement and an unauthorized charge caught straight from the contract terms.

67% → 85%

agent quality in one tuning pass; fine-tuning holds ~82% at ~70% lower cost.

2 hops

from the payment system — a shadow agent found, mapped and blocked.

The point: the intelligence accrues to Caldova — not the model. Add one source and every agent improves.

How each chapter lands the platform

Storyline (chapter)	M365 Copilot & Cowork	Microsoft IQ	Agent 365	GitHub + Foundry	Security
Chapter 1 · Copilot — the sourcing sprint	Central: shortlist, RFP, Cowork scoring, Scout	Fabric IQ + Work IQ ground the data & context	Admin Center: credit review & allocation	—	Purview auto-labels sensitive files
Chapter 2 · Build·Observe·Tune — the invoice-audit agent	—	Foundry IQ grounds the agent on contracts	FinOps governs the fleet & cost	Central: build → scale → observe → tune	—
Chapter 3 · Secure — defending the fleet	—	—	Shared registry, seen in Defender	Agents built here are secured	Central: Defender · MDASH · Perception

“Central” = the product is central to that chapter's demos. “—” = minimal or no role shown on stage. Personas consolidate to four demoers for the AI Tour.

The five-beat Caldova arc

Design principles: one company · one continuous thread · a Microsoft IQ backbone · intelligence + trust · outcome before product

How to tell it on stage

CORE MOVES

- Open with the demand signal, not the technology — the medicine, then the capacity limit.
- Keep the thread visible: every demo hands off to the next, in stage order.
- Make Microsoft IQ the connective tissue — the intelligence accrues to Caldova, not the model.
- Land the credits story in Chapter 1 (~2,600 credits ≈ \$26 vs. hundreds of thousands).
- Show governance and security as inherent to the fleet, not bolted on at the end.

Run-of-show: Act Three ran ≈ 59 min at MCAPS Start. The AI Tour optimization target is ≈ 40 min, with personas consolidated to four demoers.

WATCH-OUTS

- Don't conflate Zava (FY26 retail / smart-fiber) with Caldova (FY27 pharma).
- Don't reorder the demos — the chapter hand-offs carry the narrative.
- Personas are CELA-approved; don't change names or images.

AI Tour

All three chapters at ≈ 40 min, four demoers; outcomes first, tech light.

AgentCon

Go deep on Chapter 2 — build, observe, tune; Agent 365 fleet governance.

OpenHack

Hands-on Chapter 2 path: GitHub Copilot → Foundry → Foundry IQ → tune.

Keynote

The full red thread: signal → sourcing → agent → secured fleet.

CALDOVA

EXECUTIVE TAKEAWAY

One enterprise story — intelligence and trust, **from signal to secured outcome.**

At MCAPS Start, Caldova showed — left to right — how AI impacts Operations, Finance and Development, optimizing the supply chain and fine-tuning the agent workforce, while governing, observing and securing the AI foundation. FY27 shifts from showing individual products to telling one continuous transformation story, where the intelligence compounds within Caldova, not the model.

● Copilot

AI in the flow of human ambition

● Microsoft IQ

Amplify your intelligence — Work · Web · Foundry · Fabric IQ

● Agent 365

Trust & observability at every layer of the stack

APPENDIX

Demo Catalog & Reference

The seven demos with their MCAPS Start runtimes, the RFP template reference, and source & provenance notes.

The seven Caldova demos, in keynote order

Demo	Lead persona	Chapter	Key products	START run
Demo 1 · Analyze signals, shortlist suppliers & build the RFP	Sourcing Manager	Ch 1 · Copilot	M365 Copilot, Cowork, Fabric IQ, Work IQ, Purview	12:00
Demo 2 · Credit review & allocation	AI Compliance Analyst	Ch 1 · Copilot	Microsoft Admin Center (Agent 365)	3:00
Demo 3 · Scout tracks vendor communications	Sourcing Manager	Ch 1 · Copilot	Scout (Autopilot)	3:00
Demo 4 · Build in GitHub, scale & observe in Foundry	Developer / AI Engineer	Ch 2 · Build·Observe·Tune	GitHub Copilot, Microsoft Foundry, Foundry IQ	16:00
Demo 5 · Agent 365 FinOps governance & cost	AI Compliance Analyst	Ch 2 · Build·Observe·Tune	Agent 365 (FinOps)	4:00
Demo 6 · Tune the agent & fine-tune the model	AI Dev Lead	Ch 2 · Build·Observe·Tune	Microsoft Foundry (fine-tuning), o4-mini	7:00
Demo 7 · Defender, MDASH & Project Perception	Security Lead	Ch 3 · Secure	Microsoft Defender, MDASH, Project Perception	14:00

Runtimes are the actual MCAPS Start durations (Act Three ≈ 59 min); the AI Tour optimization target is ≈ 40 min. Personas consolidate to four demoers for the AI Tour.

Reference facts behind the Chapter 1 sourcing sprint

ADJACENT FY27 ASSETS — NOT IN ACT THREE

- Waypoint invoice-assurance reference app (github.com/caldova) — code-level companion to Chapter 2.
- Amplify Your Intelligence 3-chapter demo — separate Microsoft IQ narrative.
- Manufacturing capacity (7% gap) scenario — narrative trigger only, not an on-stage demo.

NAMING & CONSISTENCY NOTES

Caldova = FY27 pharma — the successor to the FY26 Zava storyline (Zava was smart-fiber / retail). Never mix the two.

One thread, seven demos — the demos are ordered; the hand-offs between chapters carry the narrative.

Four demoers for the AI Tour — eight stage roles consolidate to Sourcing Manager, AI Compliance Analyst, Developer / AI Engineer, Security Lead.

Personas are CELA-approved — do not change names or images without approval.

Agent 365 is the spine — the same registry governs cost in Chapter 2 and is seen in Defender in Chapter 3.

Some assets label the tenant — “Caldova (Zava-Public)” — expect that label in older material.
